

GEL LOADING ADAPTER

ABSTRACT

An adaptor for a multi-channel pipettor which allows the user to load multiple wells of a gel simultaneously using gel loading tips. The adaptor has apertures at the top which lead to channels which travel the length of the adaptor and exit at the bottom. Gel loading tips, already affixed onto a multi-channel pipettor, are inserted into the apertures at the top of the adaptor and the ends of the tips exit the adaptor through apertures at the bottom of the adaptor. The apertures at the bottom of the adaptor are spaced so that they match the spacing of wells for various gels.
